## Chapter 2: Covariance, Correlation, and Efficient Frontiers

## Problems

2 (1-7). Use the scenario analysis of the following portfolio to answer questions a to $g$ (Use Chapter 1 Homework Spreadsheet - Template.xls to answer these questions and add them in the answer box - use two decimals and \%)

|  |  | Stock Fund | Bond Fund |
| :--- | :---: | :--- | :---: |
| Scenario | Probability | Rate of Return | Rate of Return |
| Recession | 0.35 | $-9.0 \%$ | $5.0 \%$ |
| Normal | 0.40 | $6.0 \%$ | $7.5 \%$ |
| Boom | 0.25 | $28.0 \%$ | $-6.5 \%$ |

1. Determine the mean return for the stock fund
2. Determine the mean return for the bond fund.
3. Find the standard deviation of returns on the stock fund
4. Find the standard deviation of returns bond fund.
5. Determine the mean return on a combined portfolio (stocks " $s$ " and bonds " $b$ ") that consists of $50 \%$ in the stock fund and $50 \%$ in the bond fund.
6. Calculate the standard deviation of the combined portfolio
7. Calculate the correlation of the combined portfolio

2 (8-11). Use the following portfolio information to answer questions 2 a to 2 c :

| Assets | Portfolio Allocation \% | Expected Rate of <br> Return | Expected Standard <br> Deviation |
| :--- | :---: | :---: | :---: |
| Risk-Free Assets |  |  |  |
| T-Bills | $20 \%$ | $2.0 \%$ | 0 |

## Risky Assets

| Bonds | $50 \%$ | $6.0 \%$ | $10 \%$ |
| :--- | :---: | :---: | :---: |
| Stocks | $30 \%$ | $20.0 \%$ | $34 \%$ |

8. Assuming the correlation between stocks and bonds is 0.30 , compute the standard deviation of the combined risky portfolio (use $\%$ and three decimals)
9. If you had $\$ 100,000$ to invest in this portfolio, based on the allocation above-including cashcompute the expected $\$$ profit amount. (use two decimals
10. If you had $\$ 100,000$ to invest in this portfolio, based on the allocation above-including cashcompute the expected HPR\% (use \% and two decimals).
11. Assuming the correlation between stocks and bonds is negative ( -1 ), compute the standard deviation of the combined risky portfolio (use $\%$ and two decimals)
